Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	KitaHack
Project / Solution Name	FuturePath
Name (Leader)	CHANTHIRAA CHELVAN PASUPATHY
Email & Phone (Leader)	pixellynx25@gmail.com | 01163070557
University Affiliation(s)	Universiti Teknikal Malaysia Melaka (UTeM)
Live Prototype URL	https://futurepathkitahack.replit.app
Code Repository URL (public / access granted to judges)	https://github.com/Pixel-droid-16/futurepath

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

FuturePath serves a V2 browser UI through a modular FastAPI backend on Replit. Synthetic text-based CVs and profiles are parsed into candidate skills. Qwen2.5-3B-Instruct inference is configured through a RunPod Serverless GPU endpoint; a dictionary fallback is available. Users confirm extracted skills and proficiency before deterministic role matching, skill-gap analysis, course recommendations and SDG mapping. JSON catalogues and prototype SQLite hold curated role/course/signal information and demo state. Optional Claude API features depend on configuration. GitHub hosts source code and CI; scheduled evidence checks are best-effort. The shared public demo is not a production identity or durable-storage system. Secret values remain server-side; successful public deployment and live inference need final verification.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
Python 3.12; JavaScript; HTML/CSS	API and V2 browser UI	PSF / web standards
FastAPI; Pydantic	API, validation	MIT; verify versions
Uvicorn; httpx	Server, HTTP client	BSD-3-Clause; verify
pypdf; python-docx	Document parsing	BSD-3-Clause / MIT
React; ReactDOM; Babel	V2 browser runtime	MIT; verify versions

Name & Version	Purpose in Project	License
pytest; Playwright	Regression and browser tests	MIT / Apache-2.0; verify

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
RunPod Serverless API	GPU-based CV skill extraction	SDC sponsor-provided — USD $25 in RunPod computing credits for GPU inference.
Anthropic Claude API (optional)	Optional document and signal assessment	Paid if enabled; usage verify
Google News RSS / arXiv Atom	Public dated evidence feeds	Public; source terms apply
Hugging Face API / releases	Public dataset and model metadata	Public; terms apply
GitHub raw content	Published evidence snapshot retrieval	Public

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit	Web app runtime / hosting / secrets	Autoscale deployment; complimentary Replit Premium access provided through the SDC Hackathon sponsorship.

Service & Provider	Purpose in Project	Plan / Region
RunPod	Serverless GPU inference	Serverless GPU inference; PRO 6000 MIG 24GB (US-NE-1); USD $25 in sponsor-provided computing credits.
GitHub / Actions	Source control, CI, scheduled checks	Public repository / GitHub-hosted
SQLite (app container)	Prototype demo state / audit	Temporary; not durable
JSON catalogues	Roles, courses, skills, signals	Repository files

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen2.5-3B-Instruct	Alibaba Qwen / Hugging Face, deployed via RunPod	Pretrained model for CV skill extraction	Apache-2.0; verify deployed model and applicable terms
Claude (claude-opus-5-5)	Anthropic	Pretrained API model, optional	Anthropic API terms

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Skills/roles/course JSON	Team repository	Curated / mixed sources	Source terms to verify	N
Signals/evidence JSON	Public research / team curation	Curated public	Per-source terms	N

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
News and research feeds	Google News, arXiv, etc.	Public	Provider terms	N
Synthetic CVs / demo profiles	Team-created fictional examples	Synthetic	Team-owned	N
Actual user CVs	Not authorized for shared demo	Not in demo dataset	N/A	Potentially Y; do not use

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	**Used For**	**Extent of Use (minor / moderate / major)**
OpenAI ChatGPT (GPT-6)	System architecture, application coding, debugging, testing, documentation and technical planning	Major
Anthropic Claude (claude-opus-5-5)	Code analysis, implementation assistance, debugging and technical review, where used	Major
Replit AI Agent	Application development, code modification, UI integration and Signals refactoring	Major

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

AI-assisted work was reviewed in version control and checked with automated Python and browser tests. The team remains responsible for source accuracy, licenses, model outputs, privacy and final submission. Automated tests do not establish live deployment or a successful GPU inference request. Skills require user confirmation before influencing career matching.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
RunPod	USD $25 in RunPod cloud/GPU computing credits, provided through the SDC Hackathon sponsorship.	The credits support the deployment and operation of a RunPod Serverless GPU endpoint configured with the Qwen2.5-3B-Instruct model for AI-assisted CV skill extraction. The team configured and tested the GPU worker, including CUDA initialization and health checks.
Replit	Complimentary access to Replit Premium through the SDC Hackathon sponsorship.	Replit Premium was used as the development and deployment platform for FuturePath, supporting application development, testing, environment configuration, and hosting of the FastAPI web application at https://futurepathkitahack.replit.app.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

RunPod and Replit are integral to FuturePath's hackathon implementation. The USD $25 RunPod credits support GPU-backed AI inference, while complimentary Replit Premium access supports application development and cloud deployment. Both sponsor platforms were used to build and demonstrate the prototype. Although equivalent providers could replace them with architectural adjustments, RunPod and Replit remain the project's primary deployment and AI infrastructure.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

The shared hackathon demonstration is intended only for fictional profiles and synthetic CVs. CV text may be sent to RunPod for inference; optional Claude processing could send content to Anthropic if enabled. External provider retention follows their actual terms and configuration; zero retention is not claimed. Prototype SQLite data may be temporary and may be shared under the demonstration passcode, not isolated per user. Secrets belong in protected server configuration, not GitHub or client code. Real CVs and identifiable personal data must not be uploaded to this shared demo. Final deployed storage and retention settings remain to be verified.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

AI extraction may misread skills or miss evidence, and scanned documents may require a separately configured service. Proposed skills are normalized and users must confirm proficiency before scoring. GPU cold starts, rate limits and provider outages can delay inference; a lower-capability dictionary fallback is available. Career trends and Moderate/Rapid scenarios are illustrative, not employment predictions. Public sources may be stale; evidence provenance and bounded weights help reduce misleading updates. GitHub scheduling is best-effort. Shared Replit demo access and temporary SQLite storage are not production privacy or durability guarantees. Final endpoint and deployment behavior require live testing.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☐ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.

Date – 24 October 2026
